#### 1 Overview

Color-Logic's Process Metallic Color System® produces a **Silver** separation to produce metallic colors. HP SmartStream Production Pro Print Server supports the inversion of the **Silver** separation so it can be printed with **White** ink on a silver substrate.

Figure 1-1 Example — Silver inversion

- 1 **CL 4713 Silver (positive separation)**: RIPped as a positive separation for printing with silver ink.
- 2 CL 4713 Silver (inverted separation): RIPped as a negative (inverted) separation to print with white ink on a silver or metallic substrate.

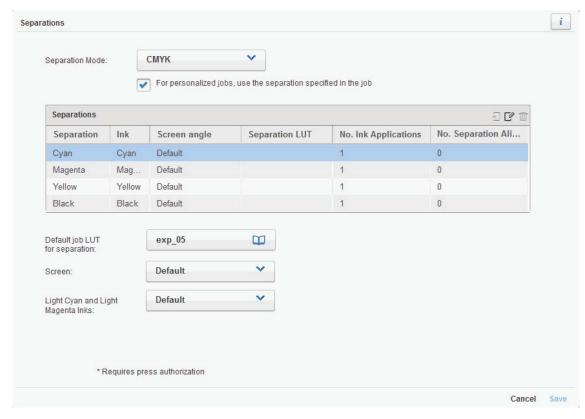

This document provides instructions to configure a ticket template in HP SmartStream Production Pro Print Server to print using this feature. This functionality is supported in HP SmartStream Production Pro Print Server 5.2 DF6 and later.

#### 2 Configure a ticket template

Follow these steps to configure a ticket template to print with White on a silver substrate.

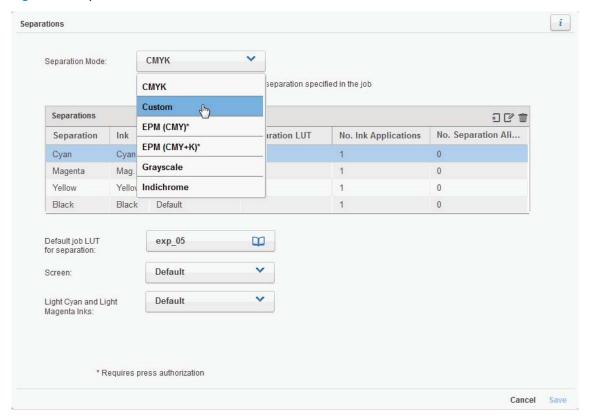

- 1. In HP Smartstream Production Pro Print Server, click the **System** tab, and then select **Ticket Templates**.
- Create a new ticket template, and then click Edit
- 3. Select the Color tab, select Advanced View, and then click Separations.

Figure 2-1 Separations window

**4.** From the **Separation Mode** drop-down list, select **Custom** (or another separation mode that supports adding spot color separations).

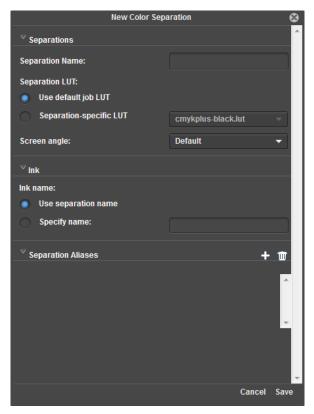

Figure 2-2 Separations window – Select Custom

5. On the **Separations** table, click **New** <section-header> to add a new color separation.

The New Color Separation dialog box opens.

Figure 2-3 New Color Separation dialog

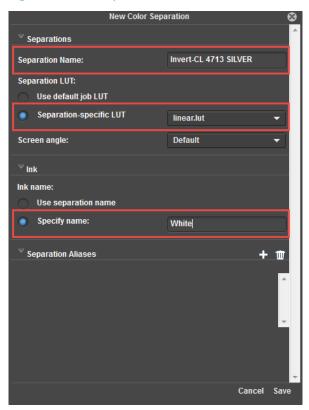

**6.** In the **Separation Name box, type** Invert-CL 4713 SILVER.

This causes the Print Server to invert the **CL 4713 SILVER** spot color in the document.

- 7. Select **Separation-specific LUT**, and then choose **linear.lut** from the drop-down list.
- NOTE: 'linear.lut' is a good starting point, but the LUT table value can be adjusted to produce the desired output.

8. Under Ink Name, select Specify name, and then type White.

Figure 2-4 New Separation - Invert-CL 4713 SILVER

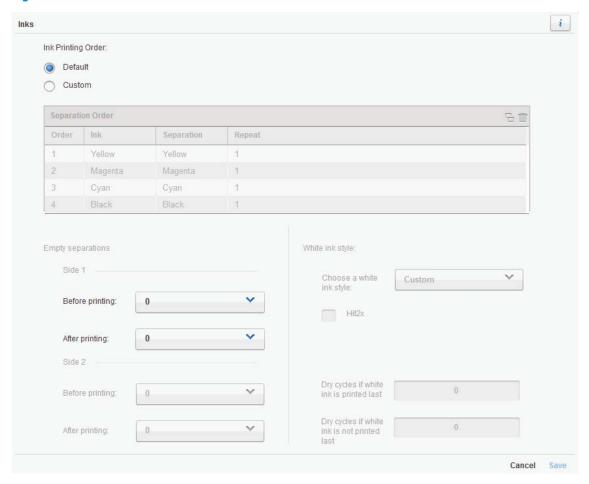

**9.** Adjust the other settings as desired, and then click **Save**. The new separation value is added to the table.

10. Click Save to close the Separations window, and then click Inks\*

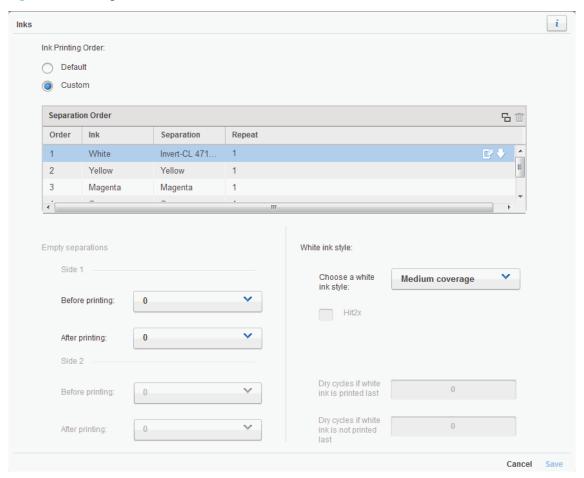

#### \*IMPORTANT: On the latest DFE, the "Inks" tab is now called "Printing Order"

Figure 2-5 Inks window

- 11. Under Ink Printing Order, select Custom, and then move the new White ink separation to the desired position in the Separation Order table.
  - NOTE: For a typical, sheet-fed multi-shot operation, the new separation should be first in the printing order.

Figure 2-6 Printing Order – Custom

- **12.** Adjust the **Empty separations** settings as necessary.
- 13. Update the **White ink style** settings as desired, and then click **Save** to close the lnks window.
- **14.** Update the other Ticket Template settings as necessary, and then click **Save Changes** to save the ticket template.

Jobs processed with this new ticket template will have the **Silver** separation inverted and printed with **White** ink.
