

## How to print a Color-Logic formatted design on the Xerox® Iridesse™ Production Press driven by the Xerox® EX-P 6 Print Server Powered by Fiery®

- 1) Click on the **+NEW** button to add **CL 4713 SILVER** (Please enter exactly as indicated, case sensitive and with spaces between CL and 4713 and 4713 and SILVER) as a new name to the **Silver** group in the **Device Center Specialty Colors**. This is a one time step to setup your system for printing Color-Logic files.

- 2) Once a file is imported, open up **Job Properties**, then select the **Specialty Color** tab and define Silver as the Underlay ...

**NOTE:** You can also reduce the amount of the silver dry ink by limiting the percentage – Color-Logic recommends reducing the Dry Ink Limit to 65% when outputting Color-Logic formatted designs.
