

Creating Movies of your FX-Viewer files

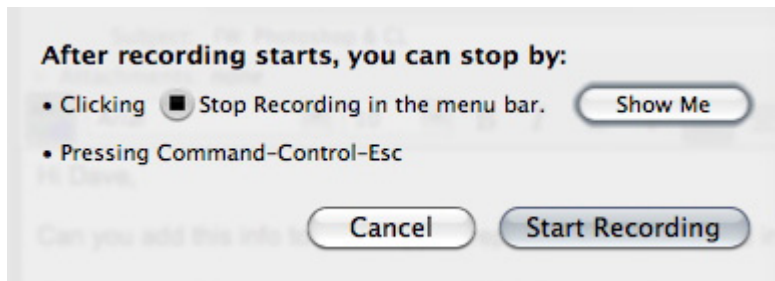

Creating a movie of your FX-Viewer design to show to your customer or for use as marketing tools for your sales force, blogs, website tutorials or presentations is extremely simple:

Using the built-in features of QuickTime to record your computer screen

1. Open an image within FX-Viewer and set your preview settings
2. Open quicktime (10.0 version) – Click on **FILE / NEW SCREEN RECORDING**.
3. click on the record button to capture the screen

4. Click inside the FX-Viewer window and rotate and zoom to animate your movie content.
5. When you are happy with the video animation, **STOP** the screen capture recording:

QUICKTIME TIPS

1. **SHORT BUT SWEET:** The longer your video/animation, the larger the file size of your movie.
2. **TRIM YOUR EXCESS:** Open your screen recording within QuickTime and TRIM the selection to remove any unwanted data from the front and back of the screen capture.
3. **SAVE FOR WEB:** Reduce the size of your movie. **FILE/SAVE FOR WEB.**

Alternative software options for screen Capture

1. Mac OSX – Snapz Pro / \$69 – www.ambrosiasw.com/utilities/snapzprox/
2. PC & MAC- www.techsmith.com/camtasia.html

Real-Time viewing with your client

If you would prefer to have direct interaction with your client and show them in real-time what your Color-Logic design project looks like using FX-Viewer, we can highly recommend signing up to a free webinar service, such as www.anymeeting.com. Anymeeting is a free service which allows you to share your computer screen over the internet with anyone using a Mac or PC. This allows you the freedom to interact with your clients, which might be in multiple locations for FREE.
